Placing IK: Community-based Knowledge, Vision and Action in Environmental Design

Wednesday, Nov. 29, noon–1:00 p.m., 502 Keller Building

photos by K. Tamminga, June '06

This slide presentation will examine environmental design as one facet of making healthy, convivial, and resilient places. It will focus on *The Mountain Project*, a collaborative research and educational outreach initiative to help foster sustainability in remote central Himalayan communities through technology-supported village-to-village communication and participatory video.

Ken Tamminga is professor of landscape architecture and a member of the graduate program in Ecology. He is interested in transdisciplinary ecological planning, design, and restoration.
